ARBITRUM DAO · TREASURY, MANAGED BY ENTROPY FOR THE ATM COUNCIL

Arbitrum treasury report, July & August 2026: the stablecoin rates

We rebuilt the yearly rate of each stablecoin position from on-chain data, day by day, and compared it with the rates the report shows.

RESULT · MOSTLY HOLDS

The rates we can check match. Two positions earn private terms that nobody outside can check.

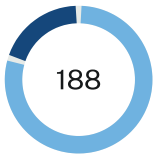

The benchmark and two of three market positions are within 0.11 points. One small position is 0.6 to 0.9 points high in August; one large one can't be checked.

BENCHMARK (AAVE USDC), LARGEST GAP

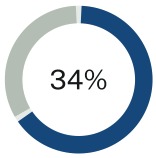

points a year; all four dates match. It also shows our reading of the chart is right

EXTRA RETURN OVER THE BENCHMARK, 31 AUG

bps on our rebuild with USDai at the report's 5.01%. Dark: the 38 that come from USDai; without it, 150

STABLECOINS NOBODY OUTSIDE CAN CHECK

Grey: USDai, $9.1M of about $27M, on private terms, confirmed by Entropy

FIGURE BY FIGURE

WHAT THE REPORT SAYS	REPORTED	REBUILT	GAP	RESULT
Benchmark: Aave USDC on Arbitrum, 4 dates	2.37–2.66%	2.36–2.63%	≤ 0.03	Matches
Spark sUSDC, 4 dates	3.53–3.61%	3.46–3.54%	+0.06	Matches
Maple syrupUSDC, 3 dates we could read	4.88–4.93%	4.80–4.83%	≤ 0.11	Unclear
Morpho Gauntlet USDC Core, August	6.83 / 7.35%	6.08 / 6.51%	+0.75 / +0.84	Unclear
USDai, April to August	5.01% flat	—	-	Can't check
September (Q3 report): benchmark, sUSDC, syrupUSDC	2.56–5.06%	2.53–4.95%	≤ 0.12	Matches
“About 190 bps” above the benchmark, 31 Aug	~190	188 (150 without USDai)	-	Rests on USDai

“Unclear” follows the rule we wrote down before we ran anything: every date within 0.5 points to match, two dates more than 1.0 point off to not match. Maple: one date is hidden behind another line on the chart (the Q3 report shows it: 0.12 higher, within the rule). Gauntlet: Entropy says it has private terms, so the chain can't show them.

WHAT THIS MEANS

The report's rates are mostly right, and its “about 190 bps above the benchmark” adds up on its own figures: 188 on our rebuild. But about 40 of those points come from USDai, a third of the stablecoins, shown at exactly 5.01% on every date from April to August. Entropy told us that position, and the small Gauntlet one, get better terms than the public rate as part of ecosystem deals, and that those terms aren't public. Better terms are good for the DAO. A reader just can't tell which rates are market rates. A short note next to those lines would answer that; Entropy told us they'll make this clearer in future reports. September, from the Q3 report, tells the same story. Nothing here suggests anyone misreported anything on purpose.

MORPHO GAUNTLET USDC CORE, DATE BY DATE

DATE	REPORT	OURS	MORPHO'S FIGURES	ENTROPY'S DATA	REPORT - OURS
15 July	2.96	2.69	2.56	2.76	+0.27
31 July	3.97	3.78	3.27	3.54	+0.19
15 August	**6.83**	6.08	6.09	5.97	**+0.75**
25 August	**7.35**	6.51	6.75	6.70	**+0.84**
Position		$1.74M on 16 Jul	$116K from 30 Jul	gone by 26 Aug	gap ≈ $900 a year

Yearly rate, 30-day average, in %. Report: read off its page-10 chart. Ours: the vault's share price on the chain. Entropy's data: worked out from the DAO's daily balances on arbdata.com, leaving out days with withdrawals.

HOW WE CHECKED

01 Read each vault's share price from the chain every day, mid-May to early September, and turned it into a 30-day yearly rate.

02 The report doesn't say how it averages, so we tried two common ways and kept whichever came closer to the report.

03 Read the report's rates off its page-10 chart (an image), and tested that reading on the Aave line, which we can rebuild exactly.

04 Wrote down what counts as a match before running anything, and asked Entropy about both positions before publishing.

WHAT WE COULD NOT CHECK

- Whether the DAO held these amounts (the report gives no wallet addresses), or the dollar interest figures. This checks rates only.
- Tokenised money-market funds (prices set off-chain), the ETH positions, and the two Morpho USDG vaults (they start in October).
- On Arbitrum we read the chain through one connection. For Gauntlet Core, Morpho's own share price agrees with it exactly.

CHECK US YOURSELF

We'll share the daily figures behind every number here: each vault's share price, day by day, and our reading of the report's chart. Anyone can read the same share prices from the chain.

Ask us for the daily figures behind every number: dvt@arcobaleno.cloud, or reply under our forum post.

INDEPENDENCE

- We hold no ARB and no deposits in any of these vaults, and won't trade them during this work or for six months after.
- Nobody paid for this check. We did it on our own initiative, as a public example.
- One of our research tests trades on paper only (no real money) across every listed futures market. It closed two paper ARB trades, in October 2026 (+20.9% and +6.7%), and holds none now.
- This is a check of reported numbers. It is not a smart-contract audit or investment advice.

We rebuilt the figures listed on page 1 from public on-chain data, without the team's own spreadsheets. The result below is our finding on those figures only.
