BALANCER DAO · WIND-DOWN

Balancer wind-down inventory, 18 September 2026

We rebuilt the inventory behind the value per BAL from on-chain data, line by line, and searched six chains for anything it left out.

RESULT · HOLDS

The published value per BAL reproduces.

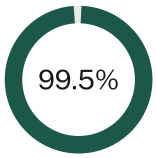

The distributable base is within 0.007% and every BAL line we read matches. One small vault left out moves the value by less than a tenth of a cent.

INVENTORY LINES THAT MATCH

within 0.01%; the other three (amber) are a rounding or about $1 each. Base: $9,960,126 rebuilt vs $9,959,416 published (+0.007%)

BASE READ FROM THE CHAIN

of the $9,960,126 base. The other 0.46%, too thin to show: three lines ($45,732) we couldn't locate or read, carried at the published value

VALUE PER BAL

reproduces; $0.15799 if the one vault we found is counted. 1,184 balances searched on six chains, no read errors

FIGURE BY FIGURE

WHAT THE REPORT SAYS	REPORTED	REBUILT	GAP	RESULT
Distributable base	$9,959,416	$9,960,126	+0.007%	Matches
BAL that can redeem, listed lines	63,068,820.84	every line	0	Matches
OpCo, shown apart from the base	$763,010	$763,009	-$1	Matches
Quantities, 33 lines	33 lines	30 within 0.01%	3 lines	Close
BAL total, Mimic vault counted	63,068,820.84	63,036,667.89	-0.051%	Close
Three lines carried at the published value	$45,732	—	0.46%	Not checked

“Close”: the three quantity differences are a rounding or about $1 each. Counting the Mimic vault puts the BAL total 0.051% off, just over the 0.05% limit we set in advance.

WHAT THIS MEANS

The $0.1579 per BAL that the wind-down uses is right. One addition for the team: a Mimic fee vault holding 32,153 BAL is on neither published list. Counting it moves the value from $0.15791 to $0.15799 per BAL, and we'd add Mimic vaults to the address list for the opening snapshot. Two large balances we looked at are owed to others, not treasury money, and were rightly left out. One on Arbitrum ($36k) is probably the same, which is an easy question for the team.

Important notice. Published on our own initiative, as a public example; nobody paid for it. Arcobaleno Research checked the figures in the published Balancer wind-down inventory against public on-chain data, as at 18 September 2026. It says only what the chain shows about the figures listed, and anyone can re-run the scripts to check it. It is not an audit of financial statements or a statutory audit (revisjon), not a smart-contract audit, not a rating, and not investment advice or a basis for buying or selling anything.

WHAT OUR SEARCH FOUND

WHERE	AMOUNT	WHAT IT IS	IN THE BASE?
Mimic fee vault 0x9e5D… 3c97	32,152.95 BAL	In the address book, on neither list; paid to Onchain Ltd on 24 Sep	Should be counted
DAO multisig 0x10A19…	≈ $1.5M	Exploit recovery and rescue funds owed to pool users	Rightly left out
dao op, Optimism	$213,139	rETH paid out to users through claims	Rightly left out
dao arb, Arbitrum	$36,175	Probably the same; no transfer history found	Open question
Five small balances	≈ $18k	0.18% of the base together	Outside the base
Pool tokens in fee collectors	≈ $16,500	513 looked through, none worth $1,000	Outside the base

Found while searching: everything worth $1,000 or more that the published lists don't include. Prices: DefiLlama, 18 Sep 2026, 14:00 UTC.

HOW WE CHECKED

01 Read every line of the published inventory on the same chain, at the stated block.

02 Priced each line with DefiLlama at the stated hour, as the inventory does.

03 Searched 1,184 balances across 23 addresses and six chains for anything worth $1,000 or more.

04 Fixed the match rules before the first read; every difference is reported, even ones that change nothing.

WHAT WE COULD NOT CHECK

- Arbitrum, Base and Polygon beyond a fixed list of major tokens (the block explorers refuse us). HyperEVM and Avalanche aren't covered.
- 219 tokens with no price and no pool. They are counted as zero.
- Three lines ($45,732) we couldn't locate or read, carried at the published value.

CHECK US YOURSELF

Every number above comes from scripts anyone can run. They need no keys and no access to us.

```
curl -O https://arcobaleno.cloud/tools/balancer-winddown-2026.tar.gz
tar xzf balancer-winddown-2026.tar.gz && cd balancer-winddown-2026
python3 scripts/rule3.py  # the base and the value per BAL, from the shipped data
./run_all.sh  # or: read everything again from the chain (slow)
```

Python 3.10+ and requests; no keys. Files, addresses, what each script does: arcobaleno.cloud/tools/balancer-winddown-2026/ · sha256 2cbd88f3…31c8f632 · signed with our release key (balancer-winddown-2026.tar.gz.asc)

INDEPENDENCE

- We hold no BAL, and won't trade it during this work or for six months after.
- Nobody paid for this check. We did it on our own initiative, as a public example.
- One of our research tests trades on paper only (no real money) across every listed futures market. If it opens a paper BAL position, we say so here.
- This is a check of reported numbers. It is not a smart-contract audit or investment advice.

We rebuilt the figures listed on page 1 from public on-chain data, without the team's own spreadsheets. The result below is our finding on those figures only.
